

NOSE CONE INSTALLATION GUIDE

SAILTECK®
Sail to win

DECK FIXING

Fix the deck/pole bracket following the instructions in the dedicated user guide, ensuring there is sufficient height for ropes to pass under the cradle.

POLE FIXING

Fix the deck/pole bracket following the instructions in the dedicated user guide, using the lowest height position.

For vulnerable installations, consider adding a safety lanyard. For more details refer to SAILTECK INSTALLATION GUIDE / LANYARD

ATTACHING THE NOSE CONE

You must prevent the possibility of a rope passing under the nose cone and lifting or breaking the bracket. If this is a risk, you must add a 3mm elastic protector before attaching the nose cone :

1

Pass the elastic through one of the two holes provided in the nose cone, and tie a stopper knot on the inside.

2

Wrap the elastic under the spinnaker pole or through suitable turning point, then pass the elastic back into the nose cone through the other hole.

3

Using a posidrive screw-driver, attach the nose cone using the M4 nuts and bolts supplied, ensuring that the free end of the elastic passes out between the cradle and the bracket.

4

Tie the free end around one of the two posts.
